The Easy Explosive Series

((Hexamine Explosive))

Ingredients:

- Ammonium Nitrate fertilizer
- Formaldehyde fertilizer

Required quantities:

- 80 grams of ammonium nitrate
- 200 ml of formaldehyde

Preparation Method with Specific Weight:

- 1- We place a piece of ice in a glass container
- 2- We add 200 ml of formaldehyde into glass
- 3- We slowly stir the 80 grams ammonium nitrate into 100 mL water in glass.
- 4- We pour the cold formaldehyde solution into the nitrate solution.
- 5- We immediately put ice while we pour the solution and we stir slowly
- 6- We boil the mixture until 3/4 of it evaporates
- 7- The hexamine granules began to appear
- 8- After the granules appeared, we pour the remaining solution from the heating process in a large glass bowl and place it in the sunlight.
- 9- After the dryness is done, white granules will form and are ready to use.

Important Information:

- There is ammonium nitrate fertilizer in the form of 34-0-0
- The formaldehyde fertilizer is a preservative substance for plants and is used in food.
- Hot air can be used to expedite the drying process.

Done

And Allah is the one who provides success
